

book scan bureau

We at Hollingworth & Moss are very proud to launch Book Scan Bureau in the UK and Europe. A revolutionary service that will scan, preserve the content and digitally archive your collections without the need for de-binding.

Book Scan Bureau uses brand new technology based on non-disruptive digital imaging, with advanced page turning and innovative cradle support. It will revolutionise and streamline the way bound documents are scanned both preserving the content and increasing the availability of this information to a wider audience.

So what makes Book Scan Bureau so revolutionary?

Book Scan Bureau uses robotic arm technology to automatically turn the page without human intervention, with a scan capacity of up to 1200 pages per hour as opposed to between 100-150 pages per hour using conventional methods.

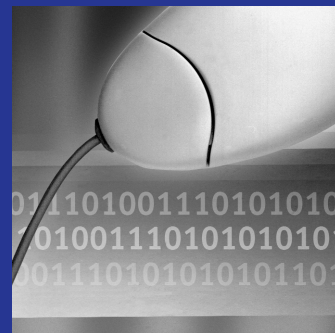

There is no longer a need to de-bind important documents, eliminating the strain on even the most fragile of bindings. There is very little preparation required therefore reducing manual handling.

Book Scan Bureau uses vacuumatic technology. Each page is picked up and turned gracefully, ensuring all your books are handled gently.

Each scan is between 300-600dpi in full colour with no distortion throughout the whole document, giving you a perfectly flat output image.

With added features such as integrated OCR (Optical Character Recognition), giving instant keyword access throughout the document.

Preserve precious volumes for future generations.

With the help of Book Scan Bureau you can digitally archive your library safely and more cost effectively, with less disruption to your documents.
